DESCRIPTORS: *Charcoal, *Gases, *Adsorption,
Heat of activation.

At temperatures of from -183° to $+100^{\circ}$ platinum exhibits no catalytic effect on the adsorption of hydrogen on charcoal. The difference at these temperatures between the adsorption on platinized and nonplatinized charcoal is attributed to the adsorption of hydrogen on the platinum, and is proportional to the platinum content. At temperatures between 300° and 800° the quantity of hydrogen adsorbed on the charcoal increases with (over)
